

# NGINX

---

*NGINX: Gzip Response NGINX*

## ***NGINX** : Web-Server & Load Balancer*

---

- How fast a website will load depends on the size of all of the files that have to be downloaded by the browser.
- Reducing the size of files to be transmitted can make the website not only load faster, but also cheaper to those who have to pay for their bandwidth usage.
- Response files can be minimise by configure Nginx to use gzip to compress files it serves on the fly.
- Compressing files use up server resources, so it is best to compress only those files that will reduce its size considerably in result.

*Will see you in Next Lecture...*

---

*Thank you!*

A close-up photograph of a hand holding a black marker, completing the cursive word 'Thank you!' on a white surface. The marker is positioned at the end of the exclamation point, and the hand is visible on the right side of the frame.
